TimePilot management software

TimePilot PC user interface

Looking for a PC-based system where employees can clock in at their computers?

TimePilot PC is for you!

This inexpensive system allows employees to clock in at their own computers or at a centrally located computer. Two versions are available: 5-license, which allows you to install on 5 computers, and single license, which allows 1 installation. Additional licenses are available and inexpensive, and both versions can handle as many as 2,000 employees.

And when it's time to prepare your payroll, TimePilot quickly and accurately calculates employee hours and prepares the data for the major payroll programs and services or in spreadsheet format.

Need greater security?

With the optional iButton Receptor, employees can identify themselves to the system with their own iButton attached to their keychains.

iButton

Put a stop to "buddy-punching"!

Our customers tell the story!

Rod MacNeille, of Charlestowne Cabinet and Countertop Distributors, a 60-employee business outside Chicago, used to spend hours processing timecards. *"Now it takes about 10 minutes,"* he says. *"I can't imagine going back to the old system of time cards."* He also likes the fact that without timecards, employees aren't tempted to alter their work hours by writing on the cards. *"One of the greatest things is that there's no way for anyone to manipulate the system."* MacNeille says the TimePilot software is easy to use. *"It's very simple. Anyone who can run a computer can hop in and do it."*

'I can't imagine going back to the old system of time cards.'

'It brought our payroll processing time down to 15 minutes with zero errors.'

Premium Wood Products' experience with timecards was "horrible," says company president Mike Wood. Wood says his old timecard system was time-consuming and *"prone to errors with guys punching in and out."* It took an hour a week to process the cards, he says. *"When we switched [to TimePilot], it brought our payroll processing time down to 15 minutes with zero errors. It's been a huge help."* Wood says TimePilot saves his firm about \$100 a month. *"That's with 15 employees. You could very easily extrapolate that [to more savings for firms with more employees]. It's a great product."*

Top 10 TimePilot software features

- User-friendly, password-protected Windows-based software.
- Handles up to 2,000 employees.
- Automatic calculation and monitoring of overtime.
- Complete report generation.
- Handles multiple departments simultaneously.
- Interfaces with ADP, Paychex, QuickBooks and many others; also exports data to a spreadsheet.
- Easily handles complicated pay policies.
- Weekly, bi-weekly, semi-monthly and monthly pay periods.
- Ability to set bonus/penalty policies.
- Absentee and on-time reporting and monitoring.

What's an iButton?

The iButton is a computer chip enclosed in a stainless steel container. Each iButton has a unique ID number which is unaffected by magnetic fields, metal detectors, water and most common chemicals. The iButton is wear-tested for 10-year durability and can be reassigned quickly and securely. In TimePilot's time and attendance systems, the iButton is part of a keyfob that attaches to an employee's keychain.

Need a wall-mountable time clock system? TimePilot has two answers!

TimePilot Extreme

Weatherproof and linebacker-tough. Mounts securely outdoors or indoors to let employees clock in right at the site. Employees use just 1 iButton to clock in and out.

TimePilot Vetro

Elegant black screen lights when employees touch it to clock in with an iButton or 4-digit code. Standalone or plug it into your network for real-time data.

Combine TimePilot systems to create the perfect system for you!
