

TimePilot Vetro frees you from the time-consuming and error-prone task of calculating employee hours from timecards each week. The computer is a perfect counting machine—why not let it do the job, quickly and accurately?

TimePilot Vetro also prevents employee altering of timecards and reduces “buddy-punching”!

Elegant, efficient, easy to use

When it's not being used, Vetro displays a clock on its sleek black face.

Looking for an electronic timeclock system?

Save time *and* money with TimePilot Vetro!

- Identifies employees by their iButton or by a 4-digit code entered on the sleek blue backlit keypad.
- No cabling needed! Mount the clock anywhere; collect your data with the included USB drive. Or plug it into your network for real-time data!
- Handles up to 500 employees—just add more iButtons.
- Works with top payroll software and services, including QuickBooks, ADP and Paychex.
- Designed and assembled in the USA.

What's an iButton?

Users touch a key-sized device called an “iButton” to the clock to clock in and out. A computer chip with a unique ID number inside each iButton identifies the user. iButtons are unaffected by water and most common chemicals, are wear-tested for 10-year durability and can be reassigned quickly and securely.

What's in the box?

- Timeclock
- USB drive
- User manual
- 10 iButtons
- Software
- Quick Start Guide

How does the Vetro system work?

1 It just takes a touch! Users clock in at the Vetro timeclock, either by tapping their iButton or entering an ID number.

2 Collect the data for payroll and upload it to your PC running the TimePilot Central software.

3 Let the TimePilot software handle all the calculations and prepare the data quickly and accurately.

With or without a network!

With a network

In this mode, the PC and clock are cabled to your network server. Data is transferred in real time through the cable.

Without a network

In this mode, there's no wired connection between the PC and the Vetro clock. You'll load the data onto the USB drive at one device and plug it into a USB port on the other.

State-of-the-art, user-friendly software
